

## How to Embed a Google Map link

To embed a Google Map link in VikingWeb, you need a Custom Content Portlet on your course page (About This Course portlet is a custom content portlet, or you can add a new one). Please refer to the resource titled Add a Portlet to a Page in the Other LMS Resources to learn how to add a portlet to a page. Also, you can refer to the About This Course/Custom Content resource under LMS Main Page Resources.

Important Note: An iFrame is an html element that allows a user to post a document inside an html document. You can use an iFrame to embed websites and YouTube videos on your course page.

Open the Google Map in a separate window and find the location or map that you want to embed.

1. Log in to VikingWeb

2. Navigate to your course

On the Main Page of your course, at the top of the left-hand column, you should see an 'About This Course' portlet. (If you have already content to the portlet, please skip ahead to the top of page 5. If you want to add a new custom content portlet, see page 6.)

3. Click Create Content in the About This Course (or other custom content portlet)

### About This Course

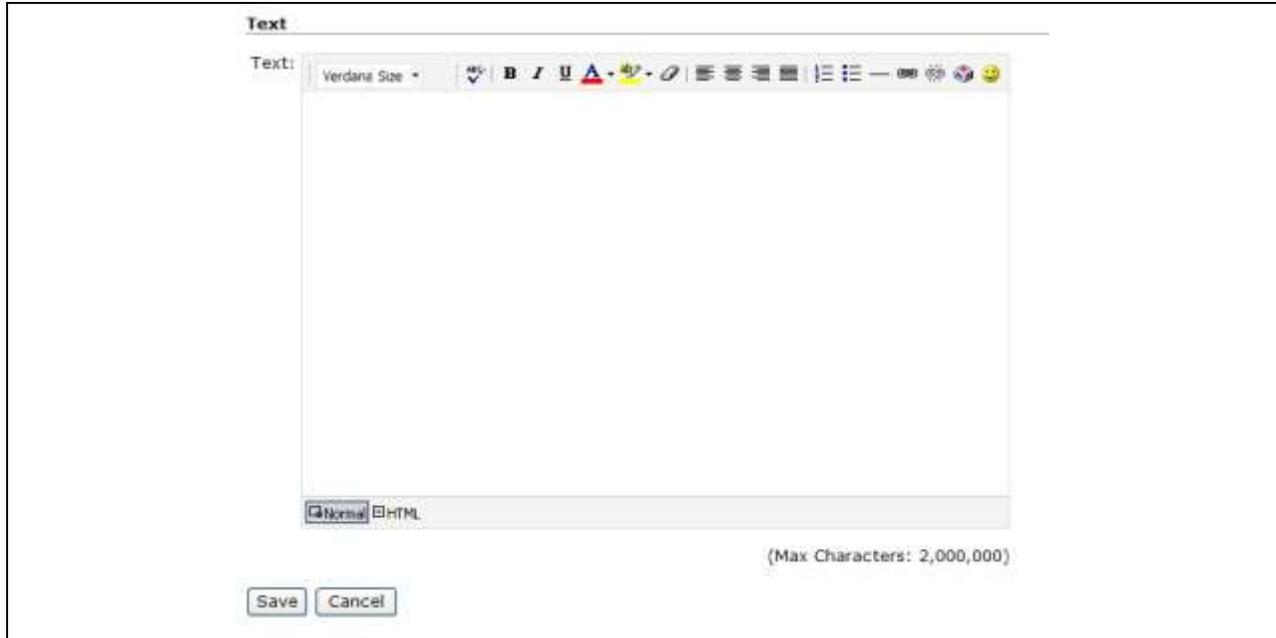

There is no content in this portlet.

You can add content in the following way(s):

[Create Content](#)

4. Scroll down the page to the text box.

## How to Embed a Google Map link

At the bottom of the text box, there are two modes: Normal and html.

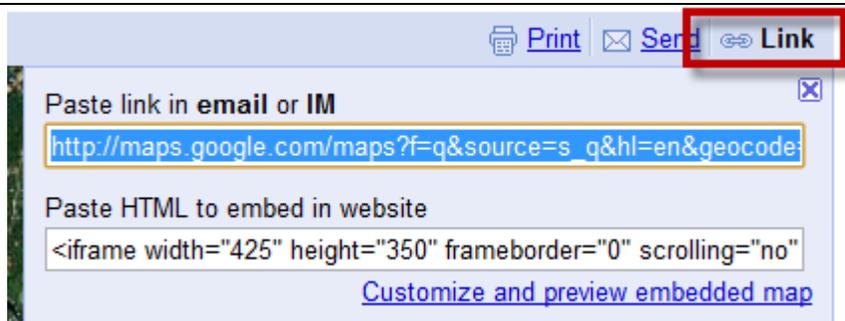

5. Switch to HTML

6. Go to the Google Map

On the right hand side of the map you should see three links – Print, Send, and Link.

7. Click Link to get the code to embed the map.

8. Click in the text box below 'Past HTML...' Right click and copy the link.

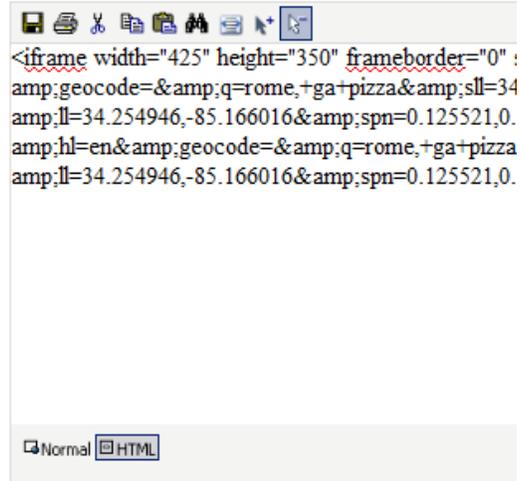

9. Paste the code from YouTube into the text area (make sure you are in html mode) of the

custom content portlet.

10. Click Save.

Text

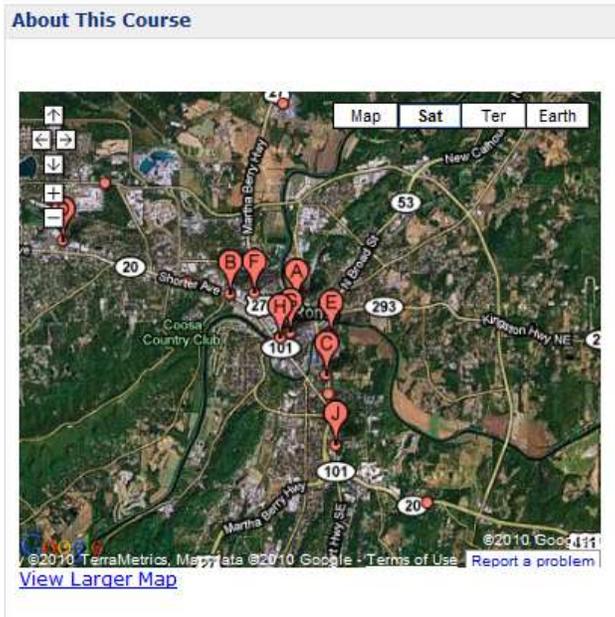

```
<iframe width="425" height="350" frameborder="0" :
amp;geocode=&amp;q=rome,+ga+pizza&amp;sl=34
amp;ll=34.254946,-85.166016&amp;spn=0.125521,0.
amp;hl=en&amp;geocode=&amp;q=rome,+ga+pizza
amp;ll=34.254946,-85.166016&amp;spn=0.125521,0.
```
